

## Kodiak Sciences to Present at Innovate Retina 2024

October 14, 2024 at 5:35 PM EDT

PALO ALTO, Calif., Oct. 14, 2024 /PRNewswire/ -- Kodiak Sciences Inc. (Nasdaq: KOD), a biopharmaceutical company committed to researching, developing and commercializing transformative therapeutics to treat a broad spectrum of retinal diseases, announced today its participation in a presentation and panel at Innovate Retina 2024 on October 17, 2024, in Chicago, Illinois.

Presentation and Panel details are below:

- **Presentation Title:** Update on Antibody Biopolymer Conjugates: Optimizing Immediacy and Durability  
**Time:** 3:30 PM CT  
**Presenter:** Mark Barakat, M.D., FASRS, Clinical Assistant Professor of Ophthalmology, University of Arizona College of Medicine – Phoenix; Founder and Director of Research, Retina Macula Institute of Arizona; Medical Director, Spectra Eye Institute
- **Panel Title:** The Future of Retinal Therapeutics  
**Time:** 6:30 PM CT  
**Kodiak Panelist:** Victor Perloth, M.D., Chairman and Chief Executive Officer

Slides of the presentation will be made available on the "Events and Presentations" section of Kodiak's website at <http://ir.kodiak.com/> at the beginning of the presentation.

### About Kodiak Sciences Inc.

Kodiak Sciences (Nasdaq: KOD) is a biopharmaceutical company committed to researching, developing, and commercializing transformative therapeutics to treat a broad spectrum of retinal diseases. We are focused on bringing new science to the design and manufacture of next generation retinal medicines to prevent and treat the leading causes of blindness globally. Our ABCD Platform™ uses molecular engineering to merge the fields of protein-based and chemistry-based therapies and has been at the core of Kodiak's discovery engine. We are developing a portfolio of three clinical programs, two of which are late-stage today and derived from our ABCD Platform and one which is platform-independent and which we believe can progress rapidly into pivotal studies.

Kodiak's lead investigational medicine, tarcocimab, is a novel anti-VEGF antibody biopolymer conjugate under development for the treatment of high prevalence retinal vascular diseases. Tarcocimab is currently being studied in two Phase 3 clinical trials, GLOW2 in patients with diabetic retinopathy and DAYBREAK in patients with wet AMD. Both studies are actively enrolling patients.

KSI-501 is our second investigational medicine, a first-in-class anti-IL-6, VEGF-trap bispecific antibody biopolymer conjugate designed to inhibit both IL-6 mediated inflammation and VEGF-mediated angiogenesis and vascular permeability. KSI-501 is being developed for the treatment of high prevalence retinal vascular diseases to address the unmet needs of extended durability and targeting multiple disease biologies for differentiated efficacy. The Phase 3 DAYBREAK study of KSI-501 in wet AMD is actively enrolling patients.

KSI-101, our third product candidate, is a novel anti-IL-6, VEGF-trap bispecific protein. Kodiak is developing KSI-101 for the treatment of retinal inflammatory diseases, as currently there are no available intravitreal biologic therapies addressing the spectrum of inflammatory conditions of the retina. The Phase 1b APEX study of KSI-101 is actively enrolling patients, as a precursor to activating the Phase 2b/3 PEAK and PINNACLE studies in patients with macular edema secondary to inflammation (MESI).
